PROFESSIONAL PROFILE

ST3+ Trust-grade Emergency Medicine clinician at Barts Health NHS Trust with an unusual parallel skillset in clinical AI and healthcare product delivery. Alongside full-time NHS practice, has independently designed and deployed an AI-powered clinical guidelines retrieval platform for Emergency Departments (*aide.fazeen.dev*), served as Founding Engineer at the clinical AI ventures *Peerr.io* and *Aiigent.io*, and previously scaled a medical education platform to 500,000+ users. Active QI co-lead and teacher of medical students and FY2 doctors. Particular interest in the **implementation science of clinical AI** — moving working prototypes through NHS clinical safety, information governance and real-world evaluation into trusted, scalable products.

CURRENT CLINICAL POST

Emergency Medicine Clinician (ST3+ Trust Grade)

Whipps Cross Hospital, Barts Health NHS Trust · Dec 2023 – present

- Delivery of acute and resuscitation-level emergency care in one of London's busiest adult A&E departments, across resus, majors and ambulatory care.
- Independent senior trust-grade decision-making; supervising and supporting foundation and core-trainee colleagues on shift.
- Co-lead for an ongoing departmental QIP on mental health pathway compliance (below); regular teaching of medical students and FY2 doctors.

QUALITY IMPROVEMENT & CLINICAL GOVERNANCE

QIP Co-Lead — Mental Health Pathway Compliance in the Emergency Department

Whipps Cross A&E · 2024 – present

- Co-leading an ongoing quality improvement project with a departmental colleague, aligned with **Royal College of Emergency Medicine** standards for the assessment and management of mental health presentations in the ED.
- Identified that manual audit data collection was a key limiter of compliance visibility; designed and deployed a **custom browser-based data-collection tool** (developed with AI-assisted coding) to streamline capture for frontline staff.
- Built a dedicated project microsite (*qip.fazeen.dev*) for documentation and dissemination; currently in data-collection phase, with departmental presentation and re-audit cycle planned on completion.

TEACHING

- **Medical Students** — regular bedside and shift-based teaching of Barts and The London School of Medicine & Dentistry students on A&E placements; clinical reasoning, procedural skills, emergency presentations.
- **Foundation Year 2 Doctors** — clinical supervision and procedural sign-off during A&E rotations; informal mentorship on QI methodology, documentation and management of the undifferentiated patient.

PREVIOUS CLINICAL EXPERIENCE

Family Physician

City Dental Clinic & Diagnostic Centre, Kerala, India · Jul 2022 – Apr 2023

- Independent primary care in a resource-limited setting; led implementation of a full Electronic Health Record system in a previously paper-based practice, achieving 100% staff adoption.

Medical Doctor (Internship)

Kasturba Medical College, Manipal, India · Mar 2018 – Sep 2019

- Statutory rotations across medicine, surgery, paediatrics, O&G and primary care. Case report on Fahr's disease subsequently presented at a medical conference, Newcastle (2021).

CLINICAL AI & HEALTHCARE TECHNOLOGY

A portfolio bridging frontline clinical practice with independent delivery of production AI and digital-health systems. Where technical stack is listed, code was written by the applicant.

Aide — AI-Assisted Clinical Guideline Retrieval Platform for EDs

Independent project · aide.fazeen.dev · 2026 – present

- Clinician-built **retrieval-augmented generation (RAG)** platform enabling ED staff to query local guidelines, pathways, contact numbers and equipment locations in plain English, with source-cited responses. Retrieves and presents information only — does not triage, diagnose, or recommend treatment.
- Stack: React 19, Convex real-time database, LLM-based agent with automated PDF/DOCX ingestion, confidence scoring, clinician feedback capture, usage analytics and audit trail. Administrator-driven content updates without IT involvement.
- Reviewed by proposed fellowship supervisor; undergoing enhancement ahead of the proposed **InnovateMD 2026 NHS deployment, clinical safety case and mixed-methods evaluation**.

Founding Engineer — Peerr.io / Aiigent.io

AI-powered clinical networking & workflow tooling · 2024

- Founding engineer on Peerr.io, a secure regulated professional network for health and life sciences; **15,000+ registered users, ~3,000 MAU**. Shipped LLM-powered features (news summarisation, job screening, content curation) using structured outputs and prompt engineering tuned for clinical accuracy.
- Co-building the sister platform Aiigent.io on a common technical foundation, hosting clinical workflow tools including **Compass** (*compass.aiigent.io*) and **NEA** (*nea.aiigent.io*).
- Responsible for SOC 2 and GDPR compliance posture across the platform: data handling, consent and content moderation appropriate to a clinical user base.

Consultant, Medical Operations & Product

DailyRounds / Marrow, Bengaluru, India · Dec 2019 – Jun 2022

- Scaled India's leading medical education platform for NEET-PG exam preparation to **500,000+ users**; led a cross-functional team of 20+ medical editors across four specialty teams with structured review and QA processes.
- Designed and launched the flagship “Pearls” feature (indexed, searchable clinical content); acted as primary clinical liaison between engineering and physician users, translating workflow into product requirements.

Independent Healthcare AI Portfolio

Sole developer · 2018 – present

- **NeurallyMed** (2022–23) — AI-powered PLAB exam preparation platform; **acquired 2023**. **AskNICE** (2023) — RAG conversational interface over NICE clinical guidelines. **Leanifi** (*leanifi.fazeen.dev*) — AI-powered fitness and nutrition assistant.
- **CXR Triage System** (2018) — convolutional neural network (PyTorch) for chest X-ray prioritisation. **ET Tube Placement Detector** (2019) — deep-learning tool for neonatal intubation verification. **MIT COVID-19 Hackathon** (2020) — **team 2nd place** in clinical AI triage track.

QUALIFICATIONS, CERTIFICATIONS & SKILLS

Medical: MBBS, Kasturba Medical College, Manipal (2019). **GMC:** 7741002, Full Registration with Licence to Practise. **Clinical courses:** Advanced Life Support (ALS, RC UK); Point-of-Care Ultrasound (POCUS).

Technical: Python, TypeScript, React; LLMs, prompt engineering, RAG; EHR implementation and clinical decision support design; SOC 2 and GDPR compliance for healthcare software. **Product & leadership:** user research, cross-functional team leadership, clinical-to-technical translation, agile delivery.

SELECTED ACHIEVEMENTS & PUBLICATIONS

- **Acquisition of NeurallyMed (2023)** — independently built AI-powered PLAB exam preparation platform successfully acquired.
- **Fahr's disease — a case report**. Presentation, medical conference, Newcastle (2021).
